

I am a listener and supporter of WPVM 103.5 in Asheville, NC. It is a great radio station that provides a diversity of news, music, and local programming that just isn't available through high power commercial radio in our area. Unfortunately, the signal from a high power FM commercial station out of Knoxville totally interferes and overwhelms the signal of WPVM in many areas, including downtown Asheville surrounding the studio. Please do whatever possible to help WPVM solve this problem. I understand there is something called contour protection that may help. I urge you to support this. Permitting licenses for more Low power FM stations is a great thing you have done. I applaud your efforts in this area and ask that you support these stations to ensure their success.

Thank you for your consideration.
